

**TOWN OF MANCHESTER
WATER AND SEWER DIVISION
PRESS RELEASE**

FIRE FLOW TESTS – Wednesday July 6 at 10 AM.

80 Buckland Hills Drive, Home Depot Site, Manchester, CT

The Town of Manchester will conduct fire flow/hydraulic capacity tests, at **80 Buckland Hills Drive, Home Depot Site** Manchester, CT to determine the effects upon the water distribution system. The test will take place **Wednesday July 6th starting 10 AM**. The hydrant flow test may result in reduced pressure and/or discoloration of the water in the area of **80 Buckland Hills Drive, Home Depot Site**, Manchester, CT. If water appears discolored, the homeowner should try to avoid using it until it clears. This will prevent rust and sediment from being brought into the home's system.

If sediment does get into a home's hot water tank, the homeowner should wait until the water clears and then open the faucet at the bottom of the tank to drain the collected material, which will settle at the bottom.

Also, if a load of wash is done during the period of discolored water, the load should be kept wet and done again after the water clears. Four ounces of cream of tartar should be added to help clean any discoloration of the clothing.

It normally takes a few hours for the water to clear in a home. If water appears discolored for an extended period, the homeowner should call the Water Division at 860-647-3201.
